

Your Child's Eyes Deserve The Best

The rate at which a child learns is directly proportional to eye health and vision development.

Vision and Eye Health

A comprehensive eye exam by your optometrist includes checking your eye's health, your eye's ability to work together and your eye's ability to distinguish detail.

AGE	VISION	OBSERVATIONS
Birth	20/400	Hyperopia, strabismus (crossed eyes), black and white vision, independent movement of eyes.
1 month		Beginning of the ability to focus
1-5 months		Red-green vision.
4-5 months	20/100	Disappearance of strabismus, effective focusing.
6 months		Blue-yellow vision, beginning of binocular vision.
7 months	20/50	Good binocular vision and rapid pursuit of objects in motion.
10-15 months		Learning to walk and active exploration.
18 months	20/40	
2-5 years	20/20	
10 years	20/15
